Strength and Skills with Bodyweight

Suggestions for developing strength with minimal access to equipment

Mobility stretches and warmups

Third world squat
Shoulder dislocates (use a stick)
Plank and pushup walkups
25 pushups, 25 different hand positions

Pose running drills:

Karaokes
Wall drill
Stable arm drill
Butt kicks
Exaggerated forward lunge
Partner falling drill
Charlie's Angels drill
Leaning forward hopping
Timed runs at particular cadences

Gymnastics skills to practice:

Tumbling
L-sit from ground, bar, and rings
Pistols
Muscle ups, on rings and bar
Planche and planche pushup
Handstands, chair handstands
Press to handstand
Human flag
Elbow lever
Front lever, on rings or bar
Back lever, on rings or bar
Iron Cross, on rings
Maltese cross, on rings
Kip-ups
Back flips, front flip

Athletics skills to develop:

vertical leap
long jump, triple jump
high jump
sprint starts

Workout suggestions

Treat all of these as you would a typical strength workout – focus on total force applied, technique, and adequate rest between sets.

Pistols 5x max on each leg. Rest after you've maxed on both legs. After each set, grab a heavier object to increase the load.

Pistol jumps 8x1 onto a box/bench/other object. Rest after you've done each leg once. Increase height of object after each successful jump.

Handstand pushups 5x5. Scale range of motion as necessary. Be sure to keep spine straight to avoid injury. On each successful set, increase the range of motion by using cement blocks, stack of books, or parallettes.

Spend 30 minutes working on one of the skills and the appropriate progression exercises in the list to the left.

With an appropriate-sized partner, hoist him/her on your back, do 10 squats, run 100m, and do 10 squats. Repeat for 6 rounds with rest after each round.

6 sets of max chest-to-bar deadhang pullups. Touch bar lower on the chest or on abdomen for a heavier stimulus.

Pick a difficult pushup standard and do 50 in any rep scheme you wish. Examples include planche, clapping, chest-slapping, double-clapping, clap behind-the-back, clap-in-front-and-behind-the-back, triple-clapping, one-armed, and one-armed-one-legged.

Do 15 sets of box jumps for height. Since this is a power test, it can sub an O-lifting session.

Do 6 sets of 100m sprints. Rest as needed after each sprint, up to 8 minutes if necessary. Treat this in your programming as a power workout.

Endurance challenges

Long workouts designed to test and build mental strength. Only recommended for an athlete who is looking for an endurance challenge and can handle high volume.

Burpee Mile

Cover 1600m through burpees. Your chest must touch the ground on each burpee, and you may jump as far forward as you wish on each jump. The next burpee must be completed precisely where your feet land. I have heard it takes about 700-800 burpees and 75-100 minutes for a reasonably fit male. Some have suggested wearing gloves. Scaling to 400m or 800m can be a challenge for those not ready for the full mile.

Triple Murph

Complete 3 Murphs in one session (1 mile, 100 pullups, 200 pushups, 300 squats, 1 mile.) First Murph is completed with weighted backpack or flak vest, partitioned 5/10/15. Second Murph is completed without partitions.

Third Murph is partitioned 5/10/15.

Scaling suggestions

Suggestions for modifying workouts for those unable to do them as prescribed.

A word on numbers: It is better to reduce numbers than range of motion. If a workout calls for multiple rounds, cut out the numbers within the rounds, not the number of rounds so that it will provide a similar metabolic effect. If it is a time-priority workout, it is good to reduce the total time allotted.

Air squats: There is no sub. Work on your air squat.

Double unders: One sub is to do singles with double the numbers, though this does nothing to actually develop the double under. Ideally you want to practice it after the substitution.

Handstand pushups: Static handstand holds for a specified number of seconds is a decent sub if you don't have the strength to do a HSPU. Another good sub is incline pushups, done with feet propped high on a wall, side of pool, or piece of furniture.

Knees to elbows: Bring knees to armpits, chest, or as high as you can. Alternatively if you don't have a pullup bar, you can do strict V-Ups or abmat situps.

L-Pullup: Do a strict pullup followed by a straight hanging leg raise.

Lunges: There is no sub. Work on your lunges.

Muscle-ups: Sub is 3 pullups + 3 dips. In order to develop the strength needed to complete a muscle-up, a better sub is 3 chest-to-bar false-grip ring pullups + 3 deep ring dips.

Pistols: Use a wall for balance. Hold a counter weight in your hand if it helps. If you cannot do a pistol, do air squats with a jump as high as you can on each one.

Pushups: Can be done on knees. It is better to lower the numbers and do them full range of motion rather than reduce the range of motion to get in the full number.

Pullups: Appropriate sub in a metcon is body rows on rings or a bar. Choose an appropriate height so that doing more than a few body rows difficult so that you build up the requisite strength. If you have body bands, hook them on the bar and under your foot. Jumping pullups (standing on a box about 9 inches under the bar) can be effective. Doing slow negatives will also build up requisite strength. Stand on a chair that allows you to have your chin over the bar, hold onto the bar, lift your legs up, and slowly release as far down as you can.

Ring dips: A good substitution is 3 bar dips for every 1 ring dip. If you don't have dipping bars, you can use two adjacent chairs, or you can get on a chair to a pullup bar and do bar dips with a pronated grip. Static holds on rings can also be effective.

Running: Nothing substitutes running. However burpees, box jumps, single-unders, and double-unders can provide a similar metabolic effect.

Toes to bar: See knees to elbows.
